In Case You Missed It: Crimson Pipeline Featured in *Pipeline & Gas Journal*

Long Beach – The just-released December issue of *Pipeline & Gas Journal*, the recognized authority on pipeline operations worldwide and the most visible publication in the industry, features an in-depth interview with Crimson Pipeline’s president Larry Alexander, which was ultimately chosen as the cover story. The *Pipeline & Gas Journal* issue highlights the company as Crimson Pipeline continues to grow and expand its midstream crude oil pipeline network throughout Southern California.

The Q&A article, “Crimson Executive Brings a Tinkerer’s Bent to Midstream,” spans topics from Alexander’s background to the company’s 700-mile network and safety practices. Alexander explains that the company’s top priority is the safety of the public and employees, and he outlines the measures that the company employs in order to ensure they are able to move crude oil as safely and efficiently as possible. The cover features an image of a Crimson employee placing a pipeline marker along one of the company’s Southern California pipelines.

Below is an excerpt of the interview, or you can find it in full [here](#).

*P&GJ: With the company emphasizing safety and regulatory compliance as core values, what initiatives are you taking to improve these two factors? What advanced technologies and protocols are you using to drive pipeline safety operations?*

**Alexander:** Crimson’s top priority is the safety of the public and employees, the environment, and property. As such, we use state-of-the-art technology to ensure our systems are operating safely and efficiently. We believe in implementing a robust integrity management plan for all of our pipelines to ensure safe and reliable operation. Safety and regulatory compliance are the driving forces behind Crimson’s operations and day-to-day business.

Our surveillance system includes up to two forms of leak detection for all of our pipelines, our 24-hour control center evaluates each pipeline’s operating conditions using trending.
while also monitoring the pressure and flow of the pipelines to make sure any irregularity is swiftly addressed.

We have always employed state-of-the-art technology and operations, including the use of smart pigs, but we’ve increased the frequency of testing on certain pipelines and now go above and beyond what is required by law. Crimson prides itself in being proactive, flexible and nimble in our operations, allowing us to be responsive to events, customers, the market and the industry.

About Crimson Pipeline
Crimson Pipeline is an integral and reliable operator in California’s vast oil pipeline network. The company safely operates approximately 700 miles of pipeline, traversing 39 cities and four counties in Southern California. These pipelines move crude oil that is the foundation for many products crucial to everyday life, including fuel for cars and heating oil for homes.
